

Atomian business software

Atomian technology for company environments provides a **series of software products developed to offer cognitive computing systems to different types of organisations.**

The focus of the products is on different corporate areas (sales, accounting and finance, logistics...), tools in use and fields of work that systematically require large amounts of data (health, insurance, banking...).

Atomian Focus

Atomian Focus products are specifically designed for corporate areas and requirements for company procedures.

These solutions are complete with previous information in a particular field (sales, accounting and finances, monitoring stock...) and can be used within days.

The Atomian Focus family currently includes:

- **Atomian Focus CRM.** This product is linked to a customer relationship management (CRM), and provides visual access and analysis methods for information on sales and clients.
- **Atomian Focus Inventory.** This programme is designed to collect data on monitored stock in the company.
- **Atomian Focus Catalog.** This application provides access to all of the information on the product, instructions manual, replacements sheet, warranty, assembly manual etc.
- **Atomian Focus Finance.** This software development provides details primarily on financial management (purchases, sales, payments). It can also be connected to a financial data analysis extension and an accounting extension.
- **Atomian Focus Tracking.** This improvement is designed for companies or corporate areas that are dependent on process tracking. Monitoring of incidents, Call Centre services, maintenance departments etc.

What do our products offer to organisations?

- **Automated business processes.** Atomian proposes and performs an action based on learning, recorded information and an automated system.
- **Access to company knowledge, with:**
- **Enterprise Search,** the organised retrieval of structured and unstructured company information;
- **Data Discovery,** the collection of relevant and significant details from knowledge recorded by the company;
- **Business Analytics,** methods and techniques to measure business performance, identifying weaknesses and highlighting useful information for decisions.

Atomian Performance

Product line designed to improve and automate business processes.

Atomian learns and automates processes used when decisions must be taken, in different situations. When a personal contribution is required, the programme instantly provides information to assist decision making. When the decision is based on recorded details, Atomian learns the information and makes a choice, improving output by automating this part of the process.

- **Atomian Dispatch** is the product designed to address incidents (ticketing) and classify messages. Atomian can automate the decision process for the most suitable tools to resolve an issue.
- **Atomian Smart Search** can interpret any text with a product purchase offer or order, and provides an informed answer with the required item or the signed order.

Atomian Go

Add-on Atomian solution for the main ERP software.

Atomian uses the data recorded and stored in the company ERP to create a cognitive database that can respond to questions in natural language.

- **Atomian Go NAV** provides instant access to all information stored in Microsoft Dynamics NAV, assisting data analysis and decision making in the company.
- **Atomian Go Murano** enables the user to ask questions and receive answers in seconds on the information in Sage Murano, with a useful and efficient management tool.

Atomian Cloud

The Atomian Cloud kit enables developers to include any source of information in the Atomian data model.

Traded under the Saas (Software as a service) license.

- **Atomian for Google Analytics.** For accurate and efficient information on the data in Google Analytics.

Atomian Healthcare

A family of products designed to locate information on the health sector.

Atomian Healthcare products are made to provide easy and intuitive access to information for medical staff and managers, in order to improve the quality of healthcare and health management.

Atomian Medical Records enables the user to use structured and unstructured data, and documents containing medical records for a hospital or health centre. Healthcare professionals are provided a cognitive tool to access information recorded on a daily basis.

Atomian Enterprise Projects

Business solutions that provide unlimited access to all of the information recorded in company systems.

We run an ad-hoc assimilation process for all of the company databases, including structured (CRM, ERP, Excel etc.) and unstructured data (PDF, Word etc.). Atomian stores the underlying meanings hidden in these data sources, providing a real explanation for the developments surrounding the organisation.

When the installation is complete, any authorized user can run as many searches as they wish in natural language, with fast responses in text format, and also lists, tables and even graphs.
